

SOS Marine Products at Work

The Netherlands-based company Svitzer Salvage is leading an international operation to clean up oil that is leaking from a container ship that stranded off the coast of New Zealand on 5 October. The MV Rena, a Greek ship sailing under a Liberian flag, struck a reef in the Bay of Plenty, an important habitat for dolphins, whales, penguins and seals. The ship is carrying 1,700 cubic metres of heavy fuel oil. Svitzer is pumping the fuel into a nearby tanker and also plans to remove the containers from the ship, although the angle of the ship will make it difficult to execute. The operation involves 250 specialists from Australia, Great Britain, Singapore and the Netherlands. Svitzer is a member of A.P. Moller-Maersk Group, and delivers towage, salvage and response solutions in more than 40 countries.

Marine salvage, off-loading vessels and off-shore drilling platform are situations where safety of personnel has always been a challenge

SOS Marine is an International Award Winning Australian company with over 20 years experience in design and manufacture of personalised safety and protective equipment.

Our company functions in a design-assist capacity, helping clients develop and implement their own custom designs, through product samples and prototypes by offering the best performance and versatility.

Lifting Harness Vest with Life Jacket
